EX.NO: 2 - BOOK BANK

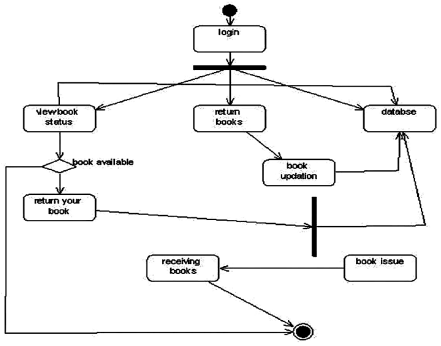

PROBLEM STATEMENT

A Book Bank lends books and magazines to member, who is registered in the system. Also, it handles the purchase of new titles for the Book Bank. Popular titles are brought into multiple copies. Old books and magazines are removed when they are out or date or poor in condition. A member can reserve a book or magazine that is not currently available in the book bank, so that when it is returned or purchased by the book bank, that person is notified. The book bank can easily create, replace and delete information about the tiles, members, loans and reservations from the system.

EX.NO: 3 - EXAM REGISTRATION SYSTEM

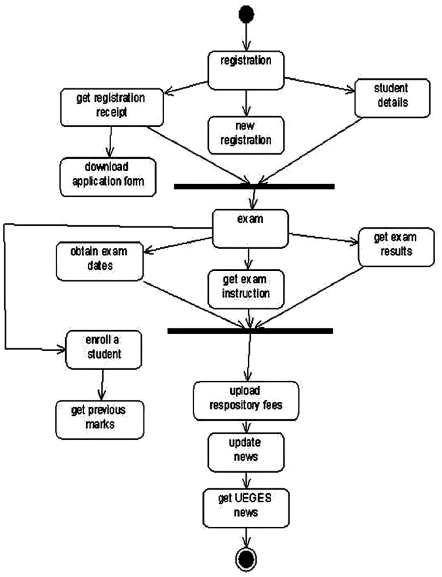

PROBLEM STATEMENT

Exam Registration system is used in the effective dispatch of registration form to all of the students. This system adopts a comprehensive approach to minimize the manual work and schedule resources, time in a cogent manner. The core of the system is to get the online registration form (with details such as name, reg.no etc.,) filled by the student whose testament is verified for its genuineness by the Exam Registration System with respect to the already existing information in the database.

EX.NO: 4 - ONLINE COURSE REGISTRATION SYSTEM

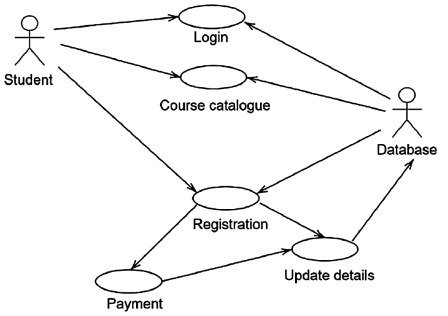

PROBLEM STATEMENT

Online Course Registration System is meant for students who wish to apply for the course through online in a college. At first the system will list the available courses in the college. Then the student will check the available seats for the particular course in the college. If the interested course is available then the student will login and directed to fill the application. The system will check for the eligibility and if the student is eligible then they will direct for payment to reserve the course. If the course is reserved, then an acknowledgement will be sent to the student and also to the registrar of the college.

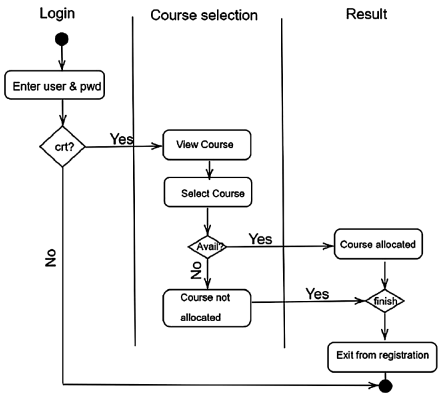

Software Requirements Specification for ONLINE COURSE REGISTRATION

1. Introduction 1.1 Purpose: This SRS is developed for the entire system. Course Registration by means of Direct communication would consume time and takes more man power. In order to resolve this one, an Automated Online Course Registration System provides a smart way to reserve the course through online which helps the student to apply in an efficient and convenient way.

EX.NO: 5 - PASSPORT AUTOMATION SYSTEM

PROBLEM STATEMENT

Passport Automation System is used in the effective dispatch of passport to all of the applicants. This system adopts a comprehensive approach to minimize the manual work and schedule resources, time in a cogent manner.

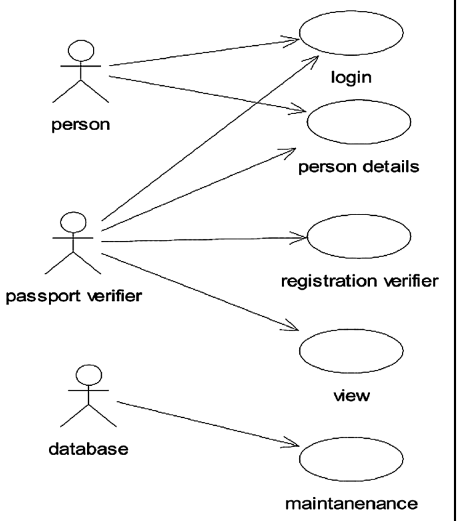

The core of the system is to get the online registration form (with details such as name, address, etc.,) filled by the applicant whose testament is verified for its genuineness by the Passport Automation System with respect to the already existing information in the database. This forms the first and foremost step in the processing of passport application.

After the first round of verification done by the system, the information is in turn forwarded to the regional administrator's (Ministry of External Affairs) office. The application is then processed manually based on the report given by the system, and any forfeiting identified can make the applicant liable to penalty as per the law. The system also provides the applicant the list of available dates for appointment to 'document verification' in the administrator's office, from which they can select one.

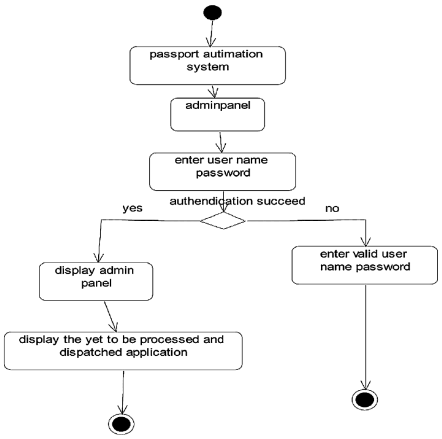

The system forwards the necessary details to the police for its separate verification whose report is then presented to the administrator. The administrator will be provided with an option to display the current status of application to the applicant, which they can view in online interface.

After all the necessary criteria has been met, the original information is added to the database and the passport is sent to the applicant.

EX.NO: 6 - ATM MANAGEMENT SYSTEM

PROBLEM STATEMENT

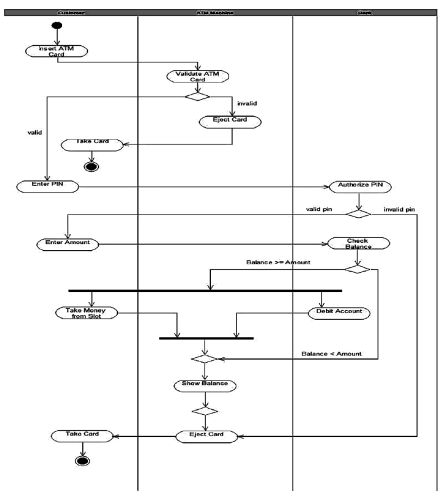

ATM is another type of banking where the most frequently type of transaction made is withdrawal. A user may withdraw as much as many amount as he wants until his account holds a sum greater than his withdrawal amount. ATM is completely automated and there is no necessity of the ATM center being placed at the bank itself. It can be placed in the shopping malls, airports, railway stations etc.

This ATM system can use any kind of interface. But it should be user friendly and not confusing. Help manuals should be provided in case any customer has problem working with the software.

EX.NO: 7 - HOSPITAL MANAGEMENT SYSTEM

PROBLEM STATEMENT

The problem statement defines the issues or challenges that the Hospital Management System intends to address. It typically includes:

Objective: To develop a software system that streamlines hospital operations, enhances patient care, and improves overall efficiency.

Challenges: Inefficient patient management, lack of centralized information, difficulty in scheduling appointments, inventory management issues, etc.

UML Diagrams: UML (Unified Modeling Language) diagrams are used to visually represent different aspects of the system. For a Hospital Management System, key UML diagrams might include:

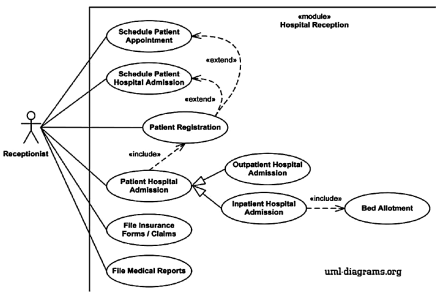

1. **Use Case Diagram** - Illustrates interactions between users (actors) and the system. Includes use cases like registration, appointment scheduling, billing, etc.

2. **Class Diagram** - Shows the static structure of the system using classes and their relationships. Entities might include Patient, Doctor, Appointment, Billing, etc.

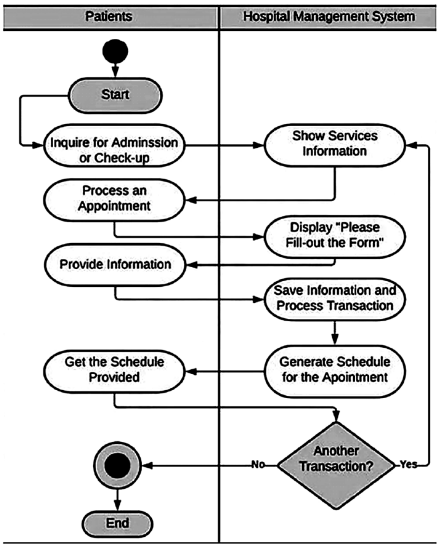

3. **Sequence Diagram** - Depicts the sequence of actions between objects in a particular scenario. Useful for showing interactions during processes like appointment scheduling or billing.

4. **Activity Diagram** - Describes the flow of activities or processes within the system. Can illustrate processes such as patient admission, discharge, or treatment flow.

EX.NO: 8 - CONFERENCE MANAGEMENT SYSTEM

PROBLEM STATEMENT

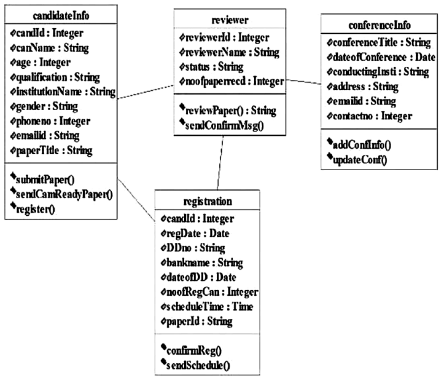

The process of the candidates is to login the conference system and submit the paper through online. Then the reviewer reviews the paper and sends the acknowledgement to the candidate either paper selected or rejected. This process of on conference management system are described sequentially through following steps,

- The candidate login to the conference management system.
- The paper title is submitted.
- The paper is been reviewed by the reviewer.
- The reviewer sends acknowledgement to the candidate.
- Based on the selection, the best candidate is selected.
- Finally, the candidate registers all details.
